After number of successfully organized regional and world youth competitions we clearly intended to present our Association as credible partner of ETTU in Organisation of big international event with European continental touch. We believe that this should be the first interim step a head of organisation of other big youth and senior continental events.

Moreover, it is undisputable that organisation of such continental event will give huge local impact both in terms of boosting the development support for our youth players as well as to strongly motivate us to increase the pace of development of our local organisation in terms of administration, infrastructure capacity and grow the number of active clubs and players.

**NEW  
DIMENSION**

Within a very short time, the DONIC BLUESTAR A1 has become the star among the rubber sheets. Its fantastic catapult and speed characteristics are due to the fine-pored sponge, but also the only slightly sticky but extremely grippy top sheet significantly contributes to the outstanding playing characteristics.

Now the high-quality DONIC rubber sheet is getting company.

The BLUESTAR A2 and BLUESTAR A3 are alternatives for all who find the 52.5° sponge of the BLUESTAR A1 too hard or who prefer a slightly softer sponge hardness which is ideal for advanced players that play up to professional level.

## THE POWER WITHIN

The DNA series is STIGA's first table tennis rubber manufactured in Germany. These table tennis rubbers are designed for a wide range of table tennis players and playing styles, from young talents who are starting to play with their first customised bat to professional players who only settle for the very best.

We have developed and designed DNA Pro in collaboration with Swedish and Chinese national team members to create a rubber that is optimal for the modern, offensive playing style. A table tennis rubber for those who play with great power and enjoy attacking – a high performance rubber that delivers results.

**DNA**  
MADE IN GERMANY

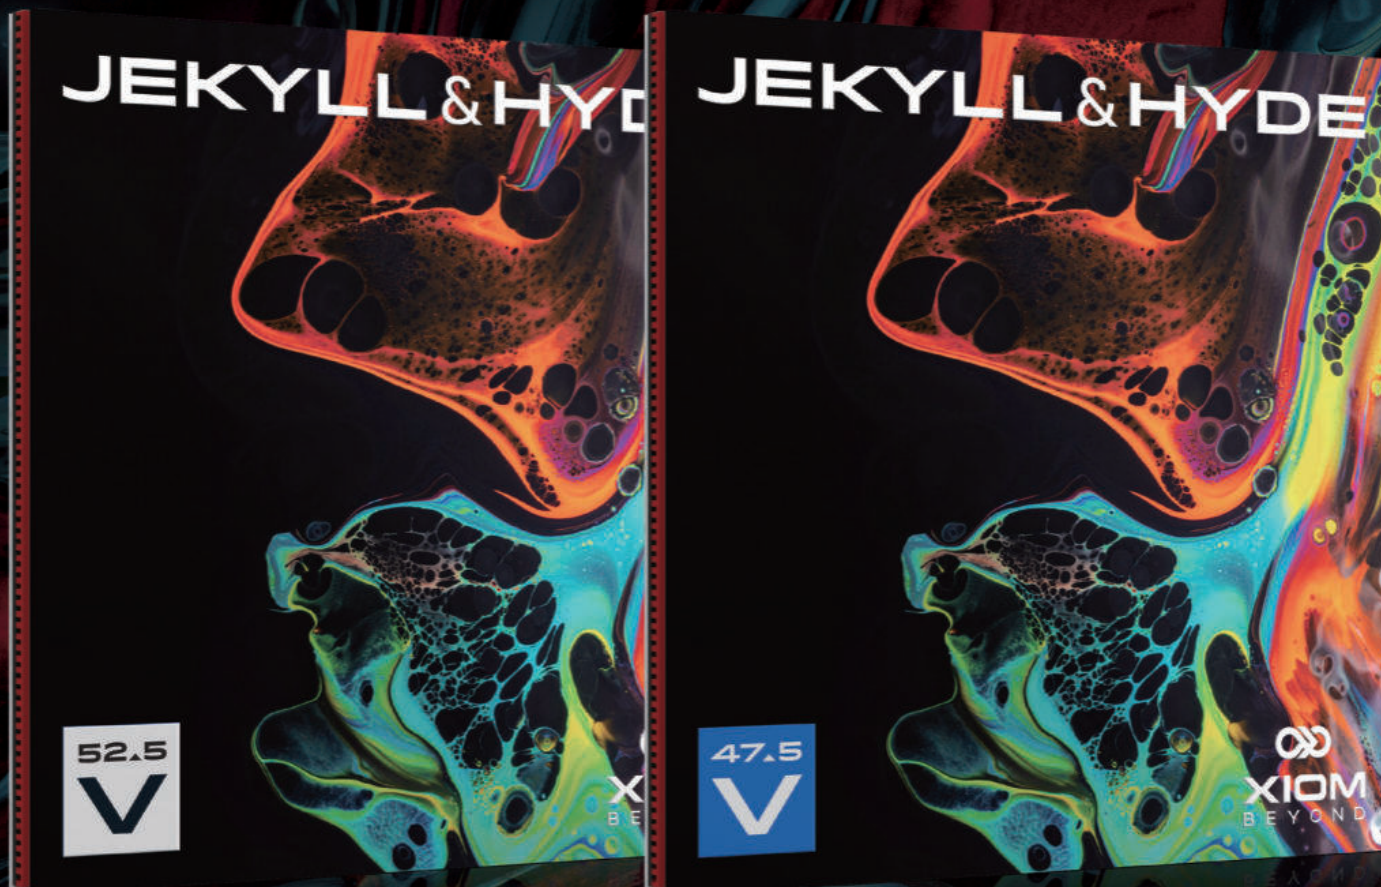

**ESC** (Enlarged Sponge Cells) technology means that the sponge has larger pores that provide a catapult effect, and thereby a higher arc in topspin rallies. It also means that the contact between the blade and the rubber is reinforced, thus providing a better feel and a crisp, clear sound when hitting the ball.

DNA PRO IS AVAILABLE WITH SPONGE HARDNESS: SOFT 42,5°, MEDIUM 47,5° AND HARD 50,0°
